

IN THE CLAIMS:

The following is a complete listing of the claims in this application, reflects all changes currently being made to the claims, and replaces all earlier versions and all earlier listings of the claims:

Claims 1 - 68. (canceled).

Claim 69. (currently amended): A television broadcasting data receiving apparatus, comprising:

a receiving unit adapted to receive television broadcasting data which includes [[an]] image data of a broadcasting program, [[a]] printing data related to the broadcasting program, and print additional information indicating an attribute of the printing data;

a print controlling unit adapted to output the printing data included in the television broadcast data received by said received unit to a printing apparatus;

an acquiring unit adapted to extract the print attribute information from the television broadcasting data received by said receiving unit; and

~~an analyzing unit adapted to analyze the contents of the print additional information acquired by said acquiring unit; and~~

a display control unit adapted to generate display data on the basis of the print additional information acquired by said acquiring unit and output, to a display device, the display data for displaying the contents of the print additional information analyzed by said analyzing unit; together with the image data included in the television broadcasting data received by said

receiving unit,

wherein said print controlling unit does not output the print additional information acquired by said acquiring unit to the printing apparatus.

Claim 70. (previously presented): An apparatus according to claim 69, wherein the print additional information includes at least one of information indicating a print sheet size of the printing data, information indicating the number of the print sheets of the printing data, and information indicating the type of the printing data.

Claim 71. (currently amended): An apparatus according to claim 69, further comprising:

an accepting unit adapted to accept a printing instruction from a user; [[and]]

wherein said [[a]] print controlling unit is adapted to perform control the output of the printing [[print]] data to the printing apparatus ~~a print device~~ on the basis of the printing instruction,

wherein the print additional information includes information indicating whether there is the printing data, and

wherein said accepting unit accepts the printing instruction from the user in a period during which said display controlling unit effects a display which indicates that there is the printing data, on the basis of the print additional information ~~printing based on the print additional information is possible.~~

Claim 72. (currently amended): An apparatus according to claim 69, further comprising:
an accepting unit adapted to accept a storing instruction from a user; and
a storage controlling unit adapted to store the printing data in a storage unit on the basis of the storing instruction,

wherein the print additional information includes information indicating whether the printing data can be stored, and

wherein said accepting unit accepts the storing instruction from the user in a period during which said display controlling unit effects a display which indicates that the printing data can be stored, on the basis of the print additional information ~~storing based on the print additional information is possible.~~

Claim 73. (currently amended): An apparatus according to claim 69, wherein the print additional information includes information for specifying a transmission period of time of the printing data, and wherein said display controlling unit displays a print execution time of the printing data on the basis of the transmission period.

Claim 74. (previously presented): An apparatus according to claim 69, wherein in case that there are a plurality of types of print additional information to be displayed by said display device, said display controlling unit displays the respective display data associated with the plurality of types of print additional information so that the display of each of the respective display data is switched over therebetween at a predetermined time interval.

Claim 75. (currently amended): A control method of a television broadcasting data receiving apparatus, comprising:

a receiving step of receiving television broadcasting data which includes [[an]] image data of a broadcasting program, [[a]] printing data related to the broadcasting program, and print additional information indicating an attribute of the printing data;

a print controlling step of outputting the printing data included in the television broadcast data received in said receiving step to a printing apparatus;

an acquiring step of extracting the print additional information from the television broadcasting data received in said receiving step; and

~~an analyzing step of analyzing the contents of the print additional information acquired in said acquiring step; and~~

a display control step of generating display data on the basis of the print additional information acquired in said acquiring step and outputting, to a display device, display data ~~for displaying the contents of the print additional information analyzed in said analyzing step,~~ together with the image data included in the television broadcasting data received in said receiving step,

wherein said print controlling step does not output the print additional information acquired in said acquiring step to the printing apparatus.

Claim 76. (previously presented): A method according to claim 75, wherein the print additional information includes at least one of information indicating a print sheet size of the printing data, information indicating the number of the print sheets of the printing data, and

information indicating the type of the printing data.

Claim 77. (currently amended): A method according to claim 75, further comprising:

an accepting step of accepting a printing instruction from a user; [[and]]

wherein said [[a]] print controlling step [[of]] performs ~~controlling~~ the output of the printing [[print]] data to the printing apparatus ~~a print device~~ on the basis of the printing instruction,

wherein the print additional informational includes information indicating whether there is the printing data, and

wherein said accepting step includes accepting the printing instruction from the user in a period during which performance of said display controlling step effects a display which indicates that there is the printing data, on the basis of the print additional information ~~printing based on the print additional information is possible.~~

Claim 78. (currently amended): A method according to claim 75, further comprising:

an accepting step of accepting a storing instruction from a user; and

a storage controlling step of storing the printing data in a storage unit on the basis of the storing instruction,

wherein the print additional information includes information indicating whether the printing data can be stored, and

wherein said accepting step includes accepting the storing instruction from the user in a period during which performance of said display controlling step effects a display which indicates that the printing data can be stored, on the basis of the print additional information ~~storing based on the print additional information is possible.~~

Claim 79. (currently amended): A method according to claim 75, wherein the print additional information includes information for specifying a transmission period of time of the printing data, and wherein said display controlling step includes displaying a print execution time of the printing data on the basis of the transmission period.

Claim 80. (previously presented): A method according to claim 75, wherein, in a case in which there are a plurality of types of print additional information to be displayed by said display device, said display controlling step includes displaying the respective display data associated with the plurality of types of print additional information so that the display of each of the respective display data is switched over therebetween at a predetermined time interval.

Claim 81. (cancelled).

Claim 82. (previously presented): A computer-readable recording medium which stores a computer-executable program for causing a television broadcasting receiving apparatus to execute the control method set out in claim 75.
